

Identity and Access Management Consulting

Identity and Access Management

Securing digital identities and controlling access to information are fundamental to ensure trust for businesses, customer and citizen services, and social interaction. To address these requirements it is necessary to fully leverage the capabilities of technologies and best practices.

Enter Identity and Access Management (IAM) - the set of business processes and supporting infrastructure for the creation, life cycle management and use of digital identities to control access to resources.

DCS IAM Solutions

Our portfolio of IAM solutions supports Digital Transformation by ensuring that even as business accelerates, risk is mitigated and security remains at the forefront. We provide the practices, the toolsets and the processes to manage user identities, their entitlements and the relationships between identities. These are essential for protecting (and sharing) organizational information while meeting regulatory and security requirements.

Our offering:

Consulting Services

Current State Assessments

IAM Workshops and Training

Identity Management and Access Management implementation and integration to enable

Automated User Provisioning and Account Reconciliation

Self-registration, self-service for credentials recovery and entitlements requests

Multi-factor Authentication, Authorization

Single Sign-on (SSO)

IoT for security and secure IoT

Federation solutions

Cross domain SSO based on trust relationships

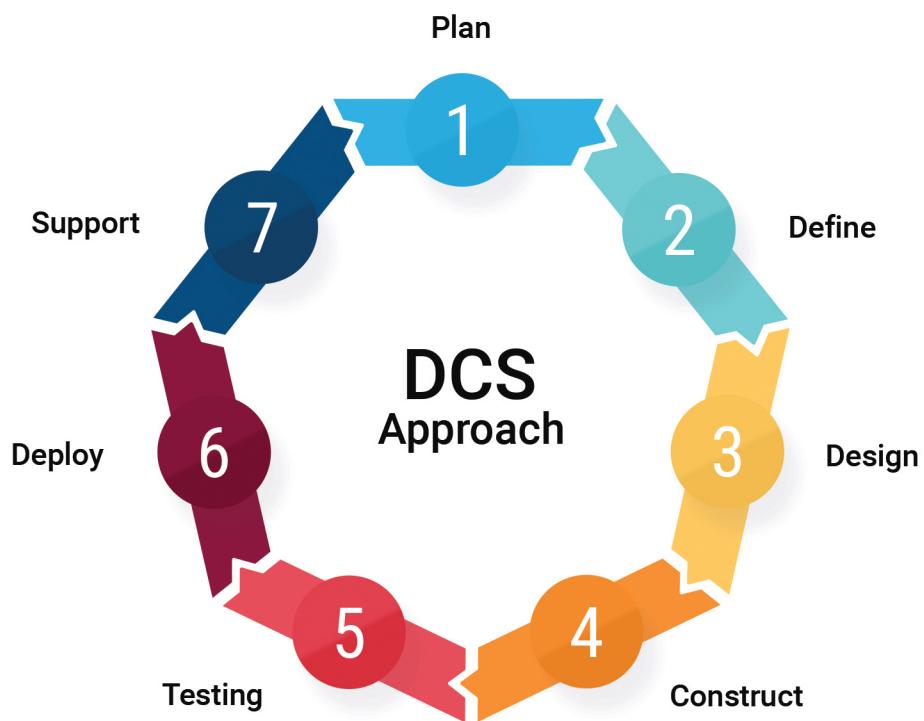

Standards-based Federated Cloud SSO

Support Services for the technologies deployed

Solution Delivery

The solutions we provide are based on open standards, open-source software and are delivered in seven-phase cycles, tailored to solve the business problems in an agile, cost effective manner.

Our approach is to cut through complexity in order to make technology manageable while not leaving behind a black box that no one wants to touch.

Why DCS

Direct Consulting Services is a team of dedicated and highly-trained professionals with over 16 years of information technology experience and over 7 years of Identity and Access Management experience. We have the capability and skilled resources to support IAM initiatives throughout the entire development and delivery lifecycle.

Our team consists of architects, certified product experts and seasoned developers, recognized for the quality of their work, depth of experience and product knowledge.
